AT DUNBAR

WE MAKE MENTORING EASY! P-TECH MENTOR TYPES

In order to make mentoring easy, we have several tiers of mentorship which allows you to decide how you would like to contribute! Please read the summaries below to learn more!

Professional Healthcare Mentors:

If you are a professional in a healthcare field who wants to support our upperclassmen as they work towards graduation, employment and continuing their education in the health sciences, professional healthcare mentors are a great option! Healthcare mentors help students build professional skills through face-to-face and electronic communication, provide options for workplace visits and shadowing opportunities, and providing ongoing career and college advice.

Academic Mentors:

If you appreciate working one-on-one OR with groups of students of all grade levels, and have a good understanding of biology (college-level biology a plus), math and/or language arts, consider being an academic mentor! High school students taking college-level courses have a lot of studying to do, papers to write and exams to complete. We need energetic individuals who can serve as tutors and/or study guides/partners for students who may need some additional help.

Research Mentors:

If you enjoy guided activities working in groups with students, other mentors, or if you are a researcher yourself, consider being a research mentor for our freshmen class. All PTECH freshmen apply to submit a science project to the [Junior Science and Humanities Symposium](#) to identify their college-readiness. You'll serve as a guide to help students with identifying research topics, planning, conducting research and answering questions.

Nursing Mentors:

Are you a nurse who wants to support our next generation of Nurses? As a part of the University of Maryland School of Nursing's NSP-II grant, we are seeking [Nurse mentors](#) to provide support to the students matriculating through the Nursing Associate degree program; our most challenging career path at PTECH. The goal? To have these students continue their education and ultimately become the next generation of BSNS!
